## DUSTING FLOUR COVERING DEVICE DU110

Encrusting Machine Related Equipment

The Dusting Flour Covering Device is used in conjunction with the Rheon Encrusting machine or CORNUCOPIA. It bonds a uniform layer of dusting flour to the surfaces of the products.

Its extremely compact design maximizes floor space. With a built-in flour collector to prevent flour from spilling outside the machine, the Dusting flour Covering Device effectively maintains factory sanitation. All parts and internal components (brush and conveyor sections) can be washed down with water, making sanitation simple.
